

Kafai Cheng

System Analyst | Full-Stack Engineering Background

✉ kafainickycheng@gmail.com | ☎ 098-720-3328 | 📍 Samut Sakhon, Thailand | [linkedin.com/in/ka-fai-cheng](https://www.linkedin.com/in/ka-fai-cheng) | github.com/kafaiNickyCheng

PROFESSIONAL SUMMARY

System Analyst with a full-stack engineering background and 3+ years of hands-on experience across the complete software development lifecycle. Delivered 6–8 end-to-end business systems — spanning production, sales, HR, and IT operations — used by 50–200 employees across a large industrial organisation. Combines deep technical capability with proven requirement gathering, workflow design, stakeholder coordination, and UAT delivery to bridge the gap between business needs and working solutions.

CORE SKILLS

- Requirement Gathering & Business Analysis
- System Workflow & Process Design
- User Requirement Documentation
- Full Software Development Life Cycle (SDLC)
- Full-Stack Development & System Integration
- Database Design & SQL
- REST API Development & Integration
- UAT Coordination & System Implementation
- Project Coordination & Cross-functional Communication

WORK EXPERIENCE

Software Engineer (Full-Stack) – System Analysis Focus 2022 – Present

Panjawattana Plastic Public Co., Ltd. · Samut Sakhon, Thailand

- Delivered 6–8 internal business systems end-to-end, covering production, sales, HR training, and IT operations for 50–200+ users across the organisation
- Led requirement gathering and stakeholder coordination across 5+ departments including production, engineering, HR, sales, and IT
- Participated in full SDLC on every project — from requirement gathering and workflow design through development, UAT, and post-deployment support
- Coordinated UAT sessions for each system release, resolving issues across cross-functional teams before go-live

FUNCTIONAL EXPERIENCE

Requirement Analysis & User Coordination

- Gathered and analyzed business requirements from 5+ departments based on user pain points and operational workflows
- Coordinated with users and stakeholders to clarify business needs and project scope across multiple concurrent projects
- Prepared meeting summaries, mockups, and user requirement documents to align development teams with business goals

System Workflow & Solution Design

- Designed system workflows, process diagrams, and technical documentation to support implementation of 6–8 business systems
- Analyzed existing business processes and proposed workflow improvements, reducing manual steps and approval bottlenecks
- Designed database structures and system architecture tailored to each project's operational requirements

Full-Stack Development & System Integration

- Developed frontend, backend, and REST API solutions serving 50–200+ internal users across production and support functions
- Managed database integration, SQL queries, and troubleshooting throughout development and testing phases
- Supported system integration with Syteline ERP and cross-functional data flows across internal business operations

UAT, Deployment & Project Delivery

- Coordinated UAT sessions across departments, resolving user-reported issues before each production deployment
- Supported system implementation, go-live activities, and post-deployment issue resolution for all delivered systems
- Handed over completed systems with documentation and user training support to ensure smooth adoption

KEY PROJECTS

HelpDesk IT Support System

Designed and developed an internal IT HelpDesk and request management system to centralise audit tracking, approval flow, and task visibility for the IT support team (~50 users).

Key Contributions

- Designed a Kanban-style ticket management workflow (similar to Jira) covering full request lifecycle for the IT team
- Implemented multi-level approval workflows based on company authorization policies, eliminating manual email-based approvals
- Improved audit visibility across all request history, approvals, task progress, and completion status
- Integrated Power BI dashboards to monitor request volume, workload distribution, and team performance

Production Management Systems (Syteline ERP Integration)

Delivered 6 integrated production modules used by 100–200 shop floor operators and engineering staff, improving manufacturing visibility, quality control, and operational traceability.

Modules Delivered

- MES — tracked operators, machine activities, production jobs, TPM activities, and breakdown records; improved machine utilisation visibility
- Job Traceability — enabled backward tracking of production history, machine usage, and quantities for quality investigation
- NCR (Non-Conformance Report) — defect tracking and root cause analysis with cross-team collaboration; integrated Power BI for defect trend reporting
- Rework Management — tracked rework stock, jobs, and defect-related costs; connected with NCR records and production workflows
- Product Trial System — managed trials, testing methods, and sample evaluation; generated customer-facing quality reports
- Smart PM Tracking — preventive maintenance tracking for machine inspection, spare parts, and technician records; reduced unplanned downtime

Key Contributions

- Gathered requirements from production, engineering, and operations teams across all 6 modules
- Designed workflows and system processes that replaced manual, paper-based tracking across the shop floor
- Supported ERP integration with Syteline for production and inventory synchronisation
- Developed Power BI dashboards for real-time operational analysis across all production modules

Sales RFQ & BOM Management Systems

Delivered a quotation and BOM management platform for the sales department, replacing manual document tracking and disconnected approval processes.

Key Contributions

- Designed and developed 6 RFQ modules: information management, estimation, vendor selection, cost per unit, quotation, and reward management
- Built BOM workflows connected to approved RFQ projects, with revision tracking and cost calculation features
- Improved document traceability and audit trail across sales, accounting, and ERP handover processes
- Reduced manual coordination between sales and accounting by automating approval and data handover workflows

HR Training & LMS System

Developed an internal Learning Management System and skill matrix platform used by HR and production teams to manage employee training and workforce capability tracking.

Key Contributions

- Developed training workflows connected with PI/WI (Process Instruction / Work Instruction) documents used across production departments
- Implemented course management, assignment tracking, and employee skill evaluation for 50–200 employees
- Added OCR functionality to extract training content directly from operational documents, reducing manual content entry
- Built employee skill matrix and competency tracking integrated with the MES system for smarter operator-job matching
- Generated BI reports for department skill analysis and workforce development planning

EDUCATION

Bachelor of Engineering in Electrical Engineering

GPA: 3.84

Rangsit University

Strong analytical thinking, problem-solving, and logical reasoning developed through engineering coursework and project-based study.

TOOLS & TECHNOLOGIES

Collaboration & Project Management: Jira • Microsoft Teams • Miro • Figma

Reporting & Automation: Power BI • n8n • LINE Messaging API

Frontend: Vue.js • Next.js • React • Angular

Backend: C# .NET API • Node.js • Golang • Microservices Architecture

Database: SQL • MongoDB
